PROFESSIONAL SUMMARY

MSc AI & ML student with hands-on experience building end-to-end GenAI and machine-learning systems — from RAG pipelines and LLM-powered agents to supervised models in production. Backed by three applied-AI and software-engineering internships and a strong mathematics foundation (BSc Mathematical Sciences, Delhi University). Seeking an AI/ML Engineer role to design and ship reliable, user-facing intelligent systems at scale.

WORK EXPERIENCE & INTERNSHIPS

Alliedworks

Jul 2026 – Present

AI Developer Intern

- Building LangChain- and LangGraph-based agentic workflows for orchestrating multi-step LLM reasoning and tool calls to automate internal business processes.
- Designing n8n workflow automations that integrate LLM decision-making with backend and third-party services, reducing manual intervention across recurring operational tasks.
- Working across vector and relational databases to structure, retrieve, and ground LLM outputs, improving response accuracy and consistency for downstream agent workflows.

Atomic North

Jan 2026 – Mar 2026

AI Engineer Intern

- Built a RAG-based Q&A assistant in Python using LangChain and FAISS, enabling natural-language search across 300+ internal documents and cutting average information-retrieval time significantly compared with manual search.
- Trained and evaluated a text-classification model (Logistic Regression vs. Random Forest in Scikit-learn) to auto-route incoming documents, achieving **~85% accuracy** on an imbalanced dataset, using a rigorous precision/recall/F1 evaluation framework.
- Owned the full ML workflow — data cleaning, feature engineering, modelling, and evaluation — using Python, Pandas, NumPy, Scikit-learn, and LangChain.

Bluestock

Oct 2025 – Nov 2025

Software Development Engineer Intern

- Built and tested **6–8 REST API endpoints** with Python and Django REST Framework, serving IPO data (pricing, dates, financials) to the live market-data web app.
- Implemented filtering and pagination logic across 100+ IPO records, enabling efficient list loading and reducing unnecessary data transfer.

PROJECTS

Market Intelligence Agent | Python, LangGraph, LLM, Streamlit

- Designed an autonomous AI research agent that plans its own multi-step search strategy, aggregating data from **5+ web sources per query** and producing a structured competitor brief in **under 60 seconds** versus ~30 minutes of manual research.
- Implemented source grounding and confidence-based fallbacks to raise answer reliability across a 25-query evaluation set; deployed as an interactive public Streamlit demo.

Price Optimization Model | Python, XGBoost, SHAP, Streamlit

- Built an ML demand-forecasting model on **1,000+ product-week records** (price, promotions, seasonality), recommending revenue-maximising price points and outperforming a flat-pricing baseline by **~12%** on test data.
- Integrated SHAP explainability to surface the top drivers of each prediction, making the model actionable for non-technical business stakeholders.

Email & Ticket Triage Automation | n8n, LLM, Gmail, Slack

- Automated an end-to-end triage workflow that classifies incoming emails and tickets by urgency and category at **~90% accuracy**, then routes, logs, and drafts responses without manual intervention.
- Added a human-in-the-loop approval gate and fallback handling for low-confidence cases, reducing manual triage effort by an estimated **70%** while keeping edge cases under human review.

SKILLS

Languages: Python, SQL, C

ML & Data: Scikit-learn, XGBoost, Supervised Learning (Regression & Classification), Feature Engineering, Model Evaluation, SHAP, EDA, Pandas, NumPy, ETL Pipelines

GenAI & Agents: LLMs, Prompt Engineering, RAG, Embeddings, Vector Databases (FAISS), LangChain, LangGraph, AI Agents, Workflow Automation (n8n)

Cloud & MLOps: AWS, Microsoft Azure, FastAPI, Streamlit, Docker, Git & GitHub, Jupyter **Visualisation:** Tableau, Statistical Analysis

CERTIFICATIONS & TRAINING

- | | |
|---|------|
| • LLM Engineering, RAG, QLoRA & Agents — AI Engineer Core Track — Udemy (Ed Donner) | 2025 |
| • AWS Academy Cloud Foundations — AWS Academy | 2025 |
| • Introduction to Microsoft Azure — Microsoft | 2025 |
| • Introduction to Large Language Models — Google Cloud / Coursera | 2024 |

CO-CURRICULAR & LEADERSHIP

IISc Bangalore HackathonMar 2026

Core Technical Contributor — AI/ML

- Built an AI-powered legal advisory prototype in a **36-hour overnight hackathon** at IISc Bengaluru; led NLP-driven query understanding and response generation under tight time pressure.
- Collaborated across a cross-functional team to scope, build, and demo a working system within the competition window, balancing model accuracy with presentation readiness.

Spread Smile Foundation, Bengaluru — Volunteer Coding EducatorJan 2025 – Mar 2025

- Taught foundational programming to underprivileged students under an NGO outreach initiative, designing hands-on exercises to build logical thinking and basic coding fluency from scratch.

ACHIEVEMENTS & AWARDS

1st Place — TechFest AI/ML Hackathon — Delhi University (Team of 2–4, ~20 teams)2024

EDUCATION

CHRIST (Deemed to be University), BengaluruJun 2025 – May 2027 (Expected)

MSc in Artificial Intelligence & Machine Learning | SGPA: 3.6 / 4.0

Maharaja Agrasen College, Delhi UniversityNov 2022 – May 2025

BSc in Mathematical Sciences | CGPA: 7.7 / 10.0
